EDUCATION

MASTER OF COMPUTER SCIENCE

UNIVERSITY OF ILLINOIS URBANA-CHAMPAIGN ; GPA : **4.0**/4.0

December 2023

Illinois, USA

BACHELOR OF ENGINEERING IN COMPUTER SCIENCE

ANNA UNIVERSITY ; GPA : **9.54**/10.0

May 2021

Chennai, India

TECHNICAL SKILLS

Languages

Java | Javascript | C++ | Python | SQL

Technologies / Frameworks

Node.js | Express.js | MongoDB | Mongoose | GraphQL | MySQL | Spring Boot | React.js | jQuery
| Git | Neo4j AWS | Apache Kafka

EXPERIENCE

GRADUATE TEACHING ASSISTANT @ UIUC

CS 222 - Software Design Lab

Aug 2023 - Present

Illinois, USA

GRADUATE RESEARCH ASSISTANT @ NCSA, UIUC

Python | Computer Vision | MySQL

Jan 2023 – Aug 2023

Illinois, USA

- Joined an elite team of professors and graduate students to work on a pollution detection project. My focus was to introduce new ways for detecting pollution such as vehicle acceleration data instead of traditional pollution sensors.
- Designed and developed a YOLOv8 system to detect vehicles and measure each detected vehicle's position over time using the **DEEPSORT** algorithm to calculate its acceleration, providing valuable insights into traffic flow and patterns.
- Created a system to send the vehicle acceleration and camera location details to a server in real time.

SOFTWARE ENGINEER @ FRESHWORKS

Java | MySQL | Spring Boot | Apache Kafka | AWS | REST API

Feb 2021 – April 2022

Chennai, India

- Re-engineered the background server of Freshmarketer by transitioning from a monolithic architecture to a **multi-layered microservices** architecture, reducing network traffic overload by **40%**.
- Achieved a substantial enhancement in email deliverability by redesigning the sign-up process, resulting in a **50%** decrease in the overall spam score percentage of the product.
- Optimized the processing time of the sign-up requests by **30%** by making the sign-up callback an **asynchronous** process.
- Enriched the email-deliverability metrics by **40%** by introducing de-duplication algorithms. Technologies Used: Redis Cache.
- Collaborated with the Freshsales product team to successfully implement a new landing page feature in the customer timeline within a **2-day** timeframe, adhering to the customer's specified deadline.
- Improved product build time by upgrading the build tool (**Gradle**), resulting in a reduction from >13 minutes to **8** minutes.

PERSONAL PROJECTS

TAG-ME-IN

Node.js | Express.js | MySQL | React.js

- Built a carpooling application that helps the University of Illinois students find people going to similar places and tag along.
- github.com/harshith2000/TagMeIn

THE DISEASE PREDICTOR

Java | Python

- Built an android application that predicts different types of external diseases with an image input using **Convolutional Neural Networks** with **89%** accuracy. Created the dataset from scratch by web scraping.
- Won the **Most Feasible Project Award** in a 36-hour hackathon conducted by ACM, SVCE.
- github.com/harshith2000/The-Disease-Predictor

EXTRACURRICULARS & LEADERSHIPS

- Vice President @ Know-I (AI Research Club)
- Joint Secretary @ The Association of Computer Engineers
- First prize in the Inter-department Coding Competition conducted by the CS department, SVCE.

June 2020 – Apr 2021

June 2019 - May 2020

February 2020
